Cambro Thermal Beverage Containers

1. Generally no preheating of the container is necessary however, in case of cold weather or if the container is quite cold, fill it with hot water and let stand until the interior is nice and toasty. Then empty out the water and fill with your desired hot beverage.
2. Always fill each container as full as possible.
3. Be sure the lid steam valve is in place before closing the container.
4. Always fill the container and close the lid as quickly as possible. Open the steam valve for a couple minutes right after putting on the lid for initial steam release.
5. Thermal containers can also be used for cool drinks.
